ProfitPilot AI
INTELLIGENT COD ANALYTICS

Enterprise Production 2026 v1.0 • Commercial License

Operations & Store Integration Manual

The #1 intelligent e-commerce financial management platform for Cash on Delivery (COD), shipping reconciliation audit, dynamic city rate calculations, and live WooCommerce & Shopify sync.

✓ 100% Deterministic Financial Engine

✓ Carrier COD Financial Reconciliation Audit

✓ Live WooCommerce & Shopify Webhooks Sync

✓ Dynamic City Delivery & Return Rate Calculator

✓ AI Financial Analyst & Ad Copywriting Copilot

✓ Full Multi-Language Engine (Arabic, English, French)

✓ Multi-Device Cloud Sync (Mobile & Desktop)

Architect: AI & Systems Engineering Team — ProfitPilot AI

Language: English (Official Edition) • **Year:** 2026

💡 Why ProfitPilot AI Was Built

In Cash on Delivery (COD) e-commerce, over 85% of merchants fall into the fatal trap of **"Phantom Gross Revenue"**. A store might record $50,000 in generated orders on Shopify, but after subtracting returned packages, reverse logistics fees, call center charges, ad spend, and unremitted courier receivables, the merchant is actually losing money!

ProfitPilot AI provides absolute clarity through a 100% deterministic calculation engine, differentiating between Actual Cash Collected, Carrier Receivables, and Real Delivery Loss.

> 📌 **System Endpoints & Local Access:**
> - Web Dashboard: `http://127.0.0.1:8000/web/`
> - Interactive API Documentation: `http://127.0.0.1:8000/docs`
> - Android Package: `ProfitPilot_AI.apk`

Chapter 1: Setup & Multi-Device Cloud Authentication

Chapter 01

1.0 Receiving Your Bundle & 1-Click Desktop Startup

Upon downloading your commercial bundle `ProfitPilot_AI_Commercial_Bundle_v1.0.zip`, follow these simple steps to launch your platform in under 60 seconds:

1. **Extract the Archive:** Right-click the ZIP archive and select *Extract All* to an easily accessible folder.
2. **1-Click Desktop Launch:** Double-click `START_PROFITPILOT.bat` located in the root directory.
3. **Automated Initialization:** The startup script verifies Python, installs any dependencies within seconds, and launches the local FastAPI calculations engine in the background.
4. **Instant Browser Access:** Your default browser automatically opens to `http://127.0.0.1:8000/web/` with the full control panel ready for use.

> 💡 **Operational Tip:** Keep the minimized server command window open while working. When finished for the day, simply close the window.

1.1 Initial Setup & Account Registration

Upon launching the platform for the first time, the intelligent **Onboarding Wizard** activates automatically. It guides the merchant through naming their store, choosing their primary operating currency (MAD, SAR, USD, EUR), entering headquarters location, and setting up their receiving bank RIB for COD payouts.

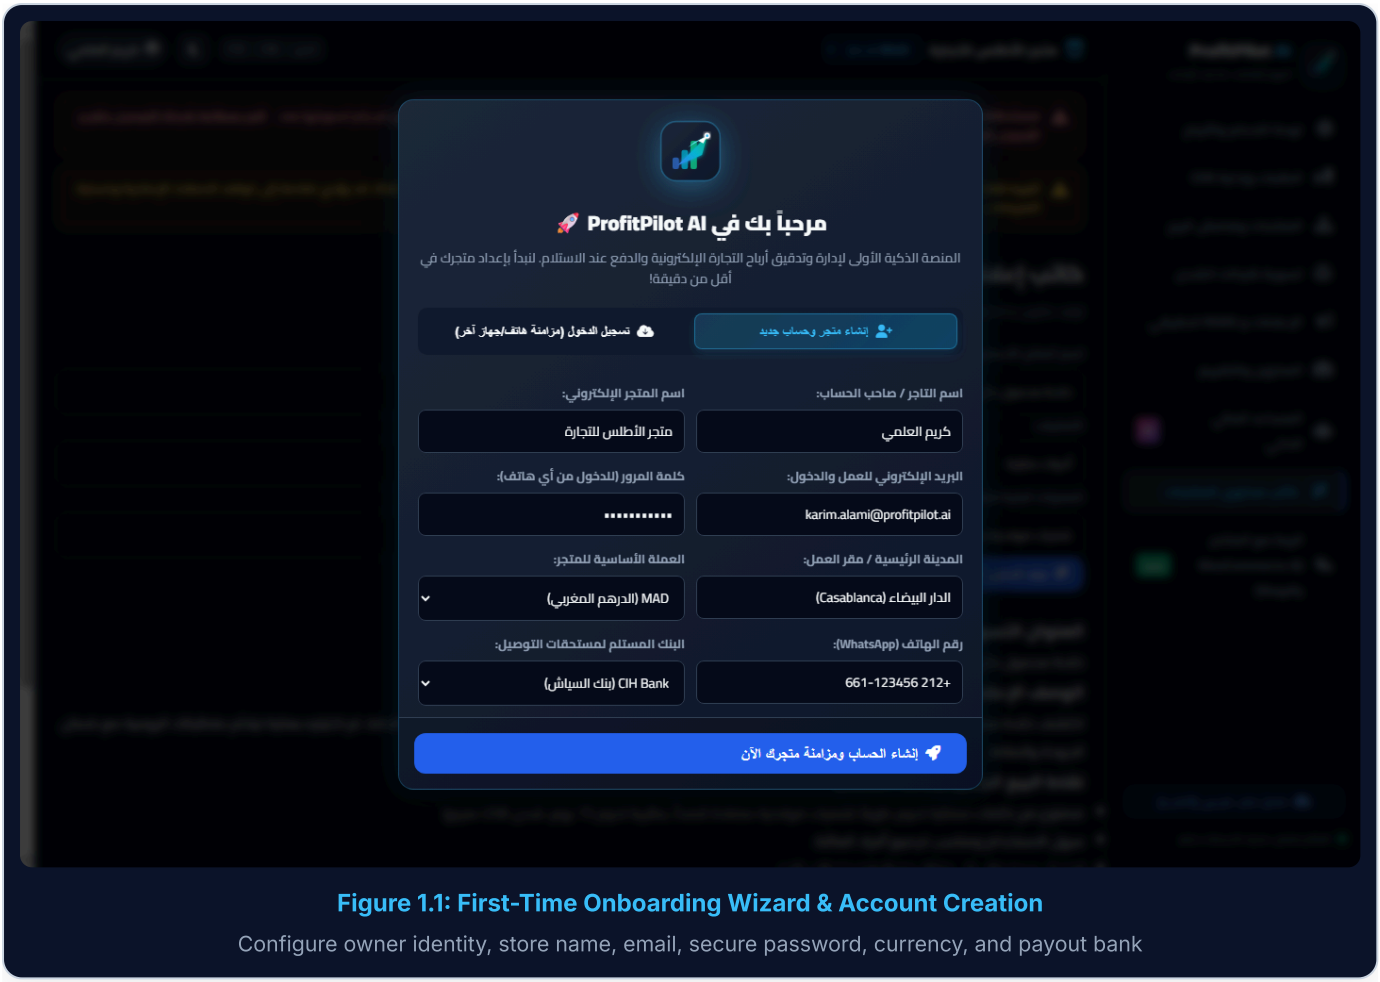

Figure 1.1: First-Time Onboarding Wizard & Account Creation

Configure owner identity, store name, email, secure password, currency, and payout bank

1.2 Multi-Device Access & Cloud Synchronization

If you register your account on a computer and later open the Android APK on a smartphone, simply toggle to the **"Sign In (Multi-Device Sync)"** tab. Entering your email and password immediately syncs all your store data, orders, and profit metrics.

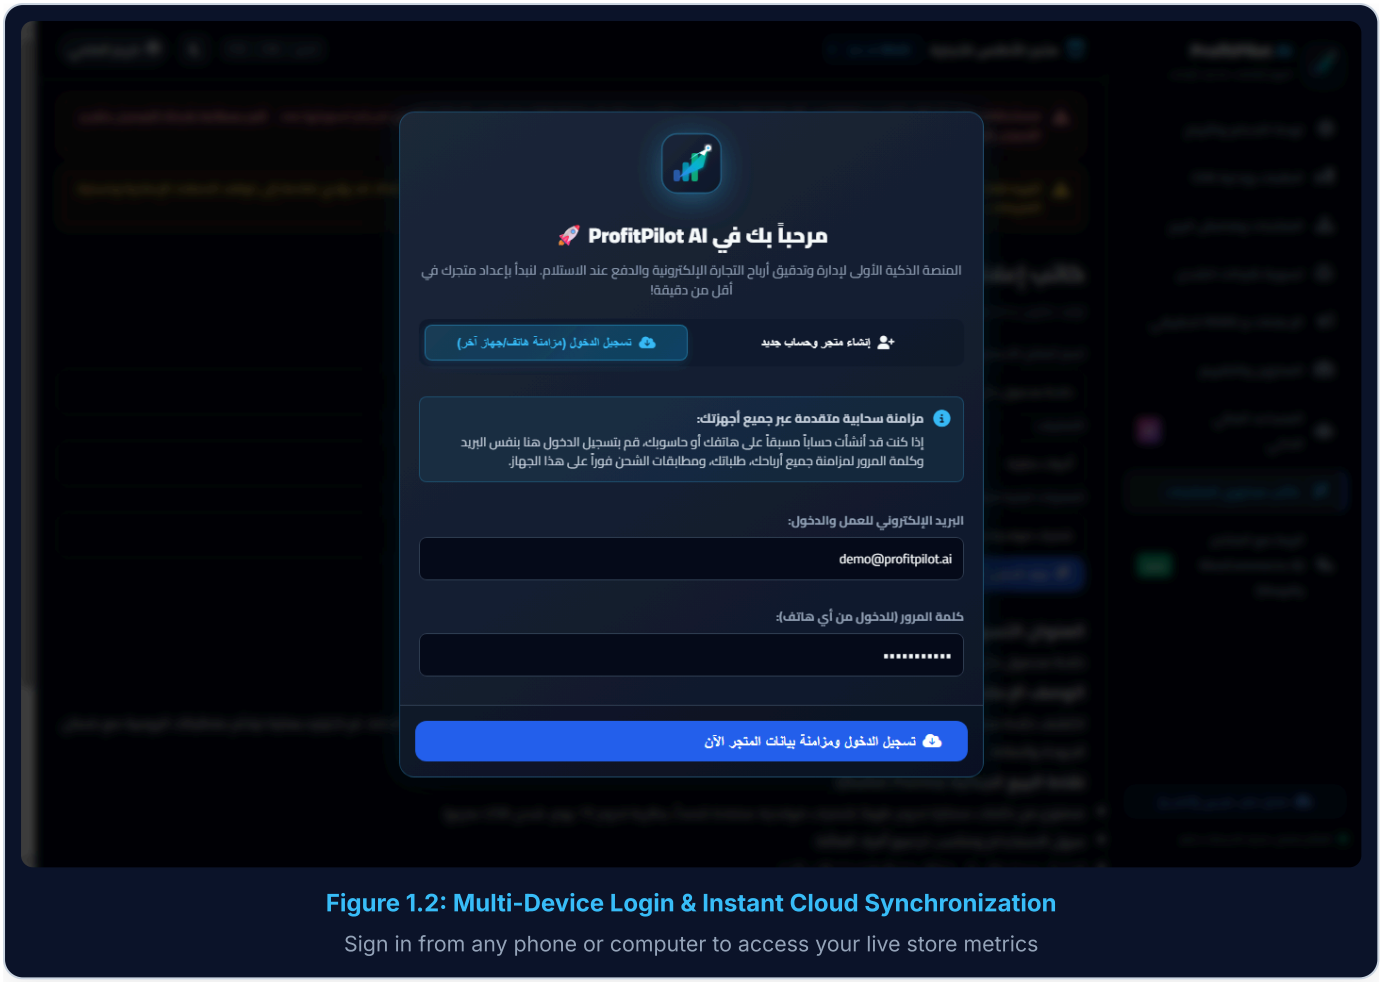

Figure 1.2: Multi-Device Login & Instant Cloud Synchronization

Sign in from any phone or computer to access your live store metrics

⚡ **100% Real-time Multi-Device Sync:** Authenticating on a secondary device loads all active orders, settlement records, and analytics instantly via JWT bearer authentication.

Chapter 2: Financial Dashboard & True Profit Engine

Chapter 02

2.1 The Deterministic Net Profit Formula

Unlike conventional dashboards that show inflated revenue based on unconfirmed orders, **ProfitPilot AI** calculates your exact business health using deterministic accounting:

> **Real Net Profit** = [Delivered Cash Collected] – [Cost of Goods Sold (COGS)] – [Delivered Shipping Fees] – [Returned Shipping & Return Fees] – [Packaging & Call Center Fees] – [Ad Spend]

Figure 2.1: Executive Financial Dashboard with Real-Time Analytics

Monitor Gross Sales, Net Real Profit, Carrier Receivables, Return Costs, and Profit Margins

2.2 Key Performance Indicators (KPIs) Defined

Financial Metric	Accounting Definition	Significance for COD E-Commerce
Gross Sales	Total monetary value of all initiated orders	Top-line volume indicator; does not reflect cash in bank.
Net Real Profit	True accounting profit after deducting all expenses and returns	The ultimate metric: actual money you keep in your business.
Carrier Receivables	Cash collected by delivery couriers not yet remitted to your bank	Critical cash-flow guardrail to prevent carrier payment slippage.
Delivery Loss	Outbound and return fees incurred on failed delivery attempts	Shows exact financial impact of returns on your marketing campaigns.

Chapter 3: Orders Management & COD Lifecycle

Chapter 03

3.1 Order Lifecycle Tracking in COD

Every e-commerce order follows a critical progression from customer checkout to final payout. ProfitPilot AI provides status-specific tracking with per-order profit attribution.

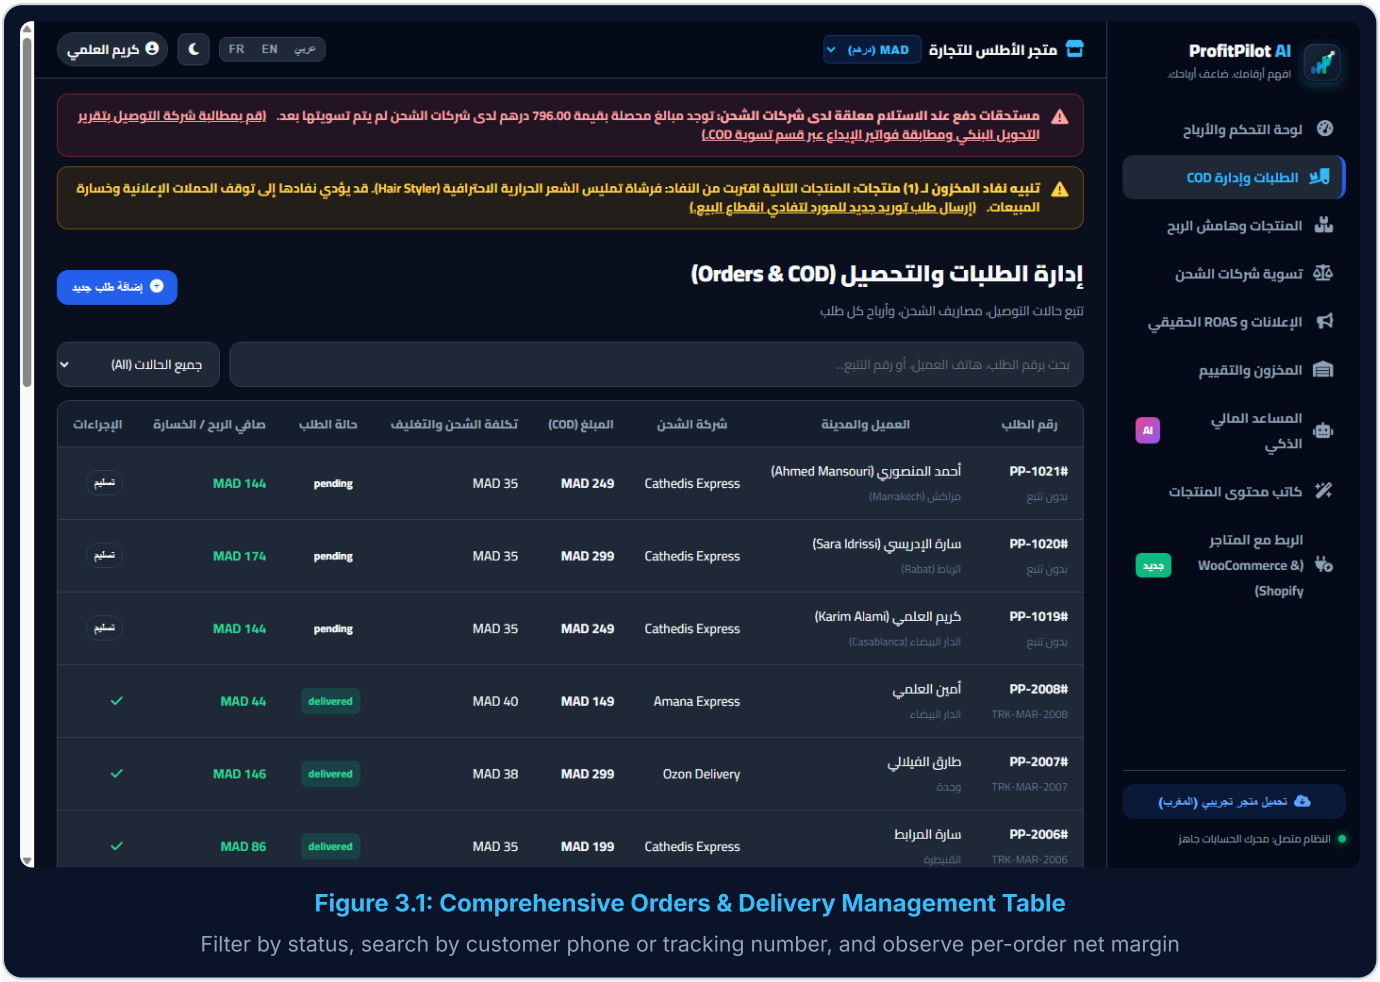

Figure 3.1: Comprehensive Orders & Delivery Management Table

Filter by status, search by customer phone or tracking number, and observe per-order net margin

3.2 Lifecycle Statuses & Financial Triggers

- **Pending**: Newly arrived order awaiting call-center confirmation.
- **Confirmed**: Customer confirmed phone and physical delivery address.
- **Shipped**: Handed over to courier with assigned tracking code.
- **Delivered**: Successfully handed over, cash collected, and carrier receivable registered.
- **Returned**: Customer rejected order; outbound + return fees deducted from ledger.

⚠️ **Crucial COD Fact:** When an order becomes "Returned", you don't merely lose the gross sale. You actively lose the outbound shipping fee + return reverse fee + packaging cost. ProfitPilot AI calculates this exact loss per order.

Chapter 4: Create Order & Dynamic City Rate Calculator

Chapter 04

4.1 Clean Order Entry Form with Instant Rate Estimation

The "Create New Order" modal opens with completely clean fields and helpful placeholders. Selecting the customer's city triggers an instantaneous lookup against the assigned courier's city rate table, calculating exact delivery fees before dispatch.

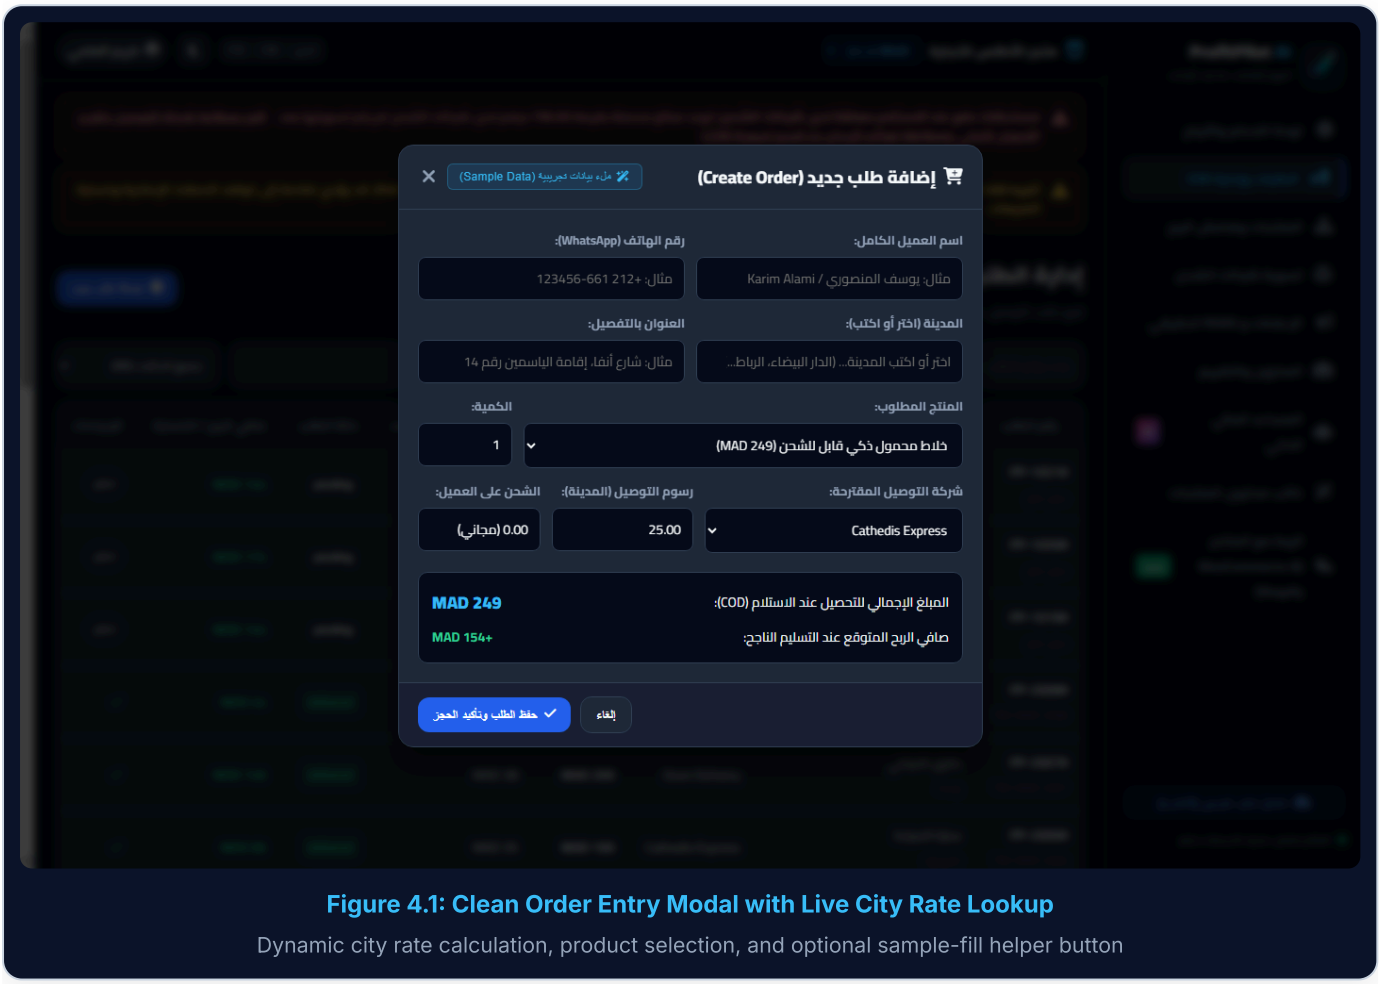

Figure 4.1: Clean Order Entry Modal with Live City Rate Lookup

Dynamic city rate calculation, product selection, and optional sample-fill helper button

4.2 Creating an Order in 4 Quick Steps

1. **Customer Information:** Enter customer full name, WhatsApp phone number, and street address.
2. **City Selection:** Select destination city; delivery fee is calculated immediately.
3. **Assigned Carrier:** Choose courier company (e.g. Cathedis, Ozon, Amana).
4. **Products:** Add items and quantities; total COD amount is computed automatically.

Chapter 5: Carrier COD Financial Reconciliation Audit

Chapter 05

5.1 The Bleeding Wound in COD E-Commerce

Couriers handle millions in cash daily. When payouts are delayed or arbitrary fees are deducted, merchants without an automated audit engine lose thousands every month. **ProfitPilot AI's COD Audit Engine** solves this permanently.

Figure 5.1: Carrier Reconciliation Table & Outstanding COD Balances

Track total collected cash, pending courier remittances, and bank settlement status

5.2 How the Three-Way Audit Works

- **1. Internal System Ledger:** Tracks every order marked "Delivered" and the exact cash due.
- **2. Settlement Statement:** Generates a formal settlement receipt summarizing delivered parcels and net payable.
- **3. Bank Reference Verification:** When the carrier executes a bank transfer, enter the bank transaction reference number to close the audit loop.

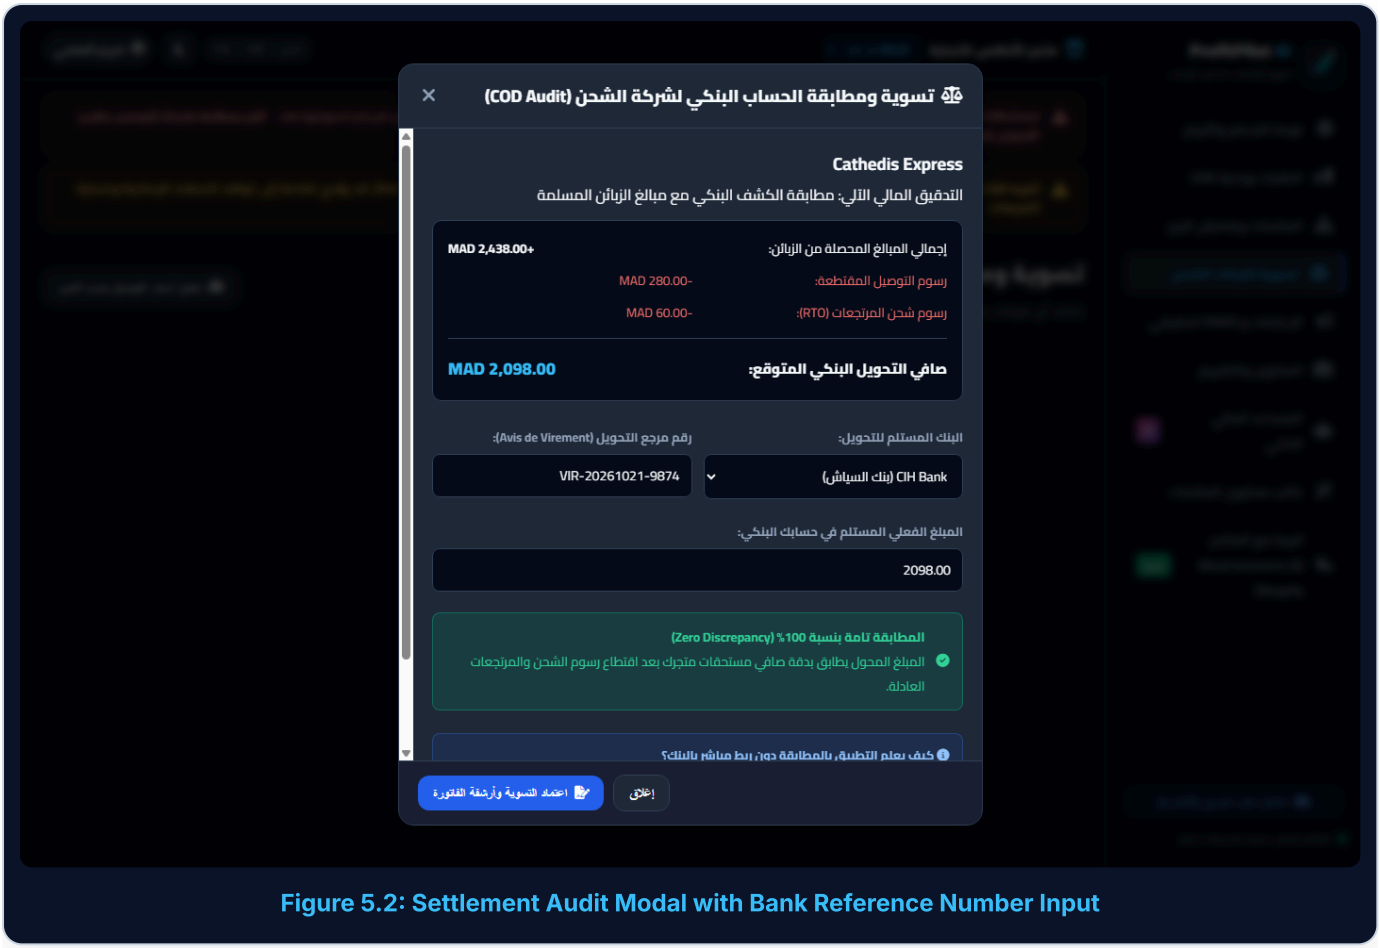

Figure 5.2: Settlement Audit Modal with Bank Reference Number Input

Chapter 6: Custom Carrier City Delivery & Return Rates

Chapter 06

6.1 Granular City-by-City Courier Pricing

Shipping rates naturally vary by geographic distance. Delivering within the merchant's base city costs significantly less than remote or peripheral regions. ProfitPilot AI enables custom delivery and return fee overrides per carrier and city.

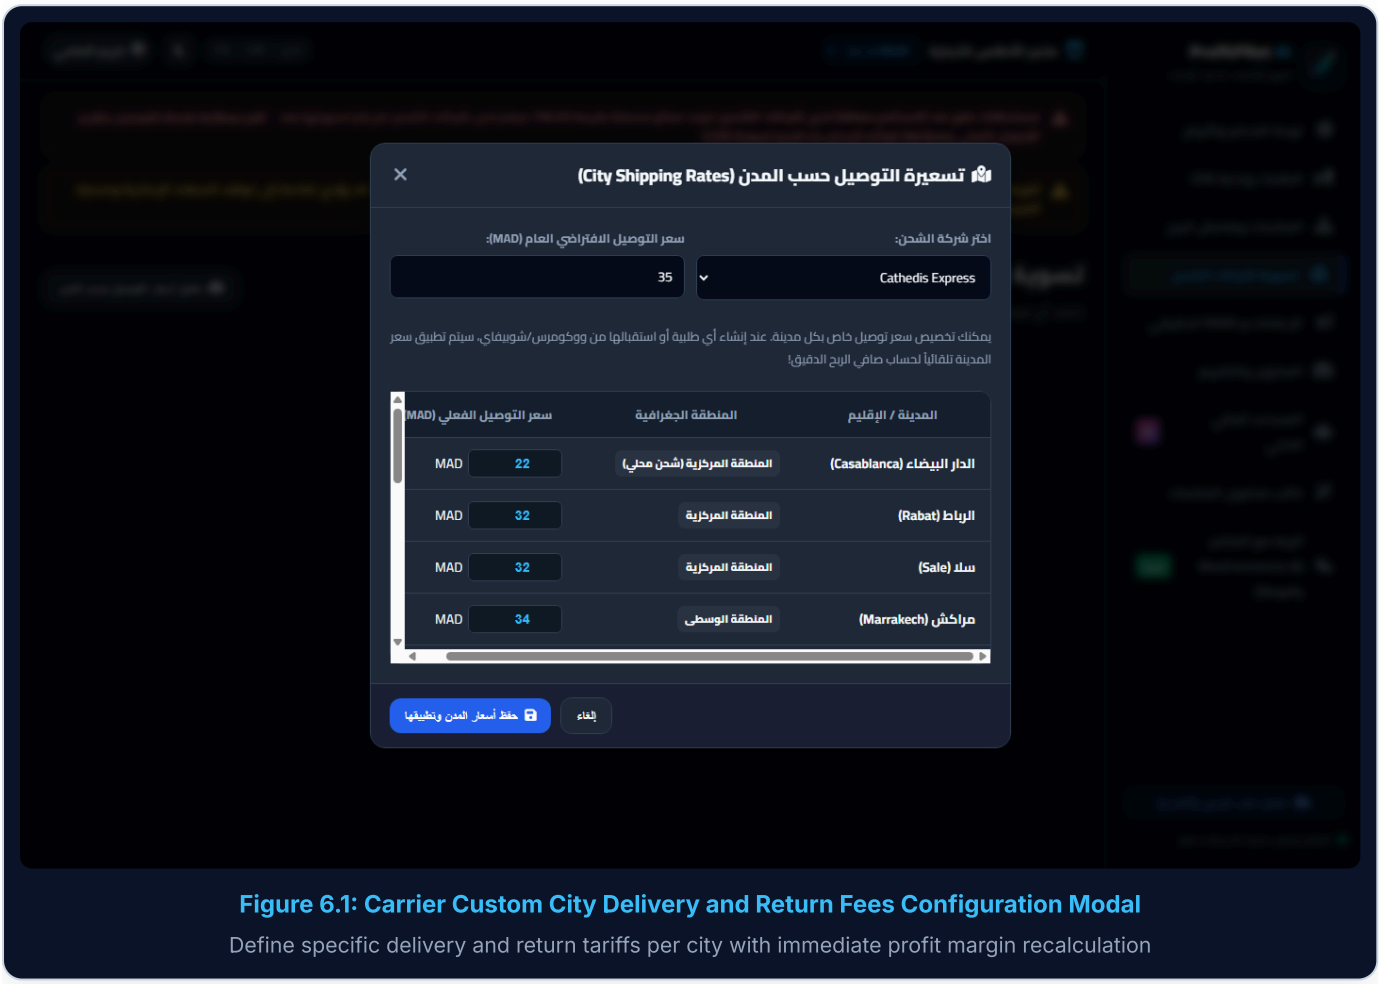

Figure 6.1: Carrier Custom City Delivery and Return Fees Configuration Modal

Define specific delivery and return tariffs per city with immediate profit margin recalculation

💡 **Real Margin Protection:** By setting accurate city rates, your projected margins reflect reality rather than an unrealistic flat national average.

Chapter 7: Marketing Analytics & True Delivered ROAS

Chapter 07

7.1 The Social Media Ad Manager Illusion

Facebook Ads and TikTok Ads report ROAS based on initial pixel purchase events. If your delivery rate is 50%, a reported 4.0x ROAS is actually a **2.0x Delivered ROAS**! ProfitPilot AI calculates true ROAS based strictly on **collected cash from delivered parcels**.

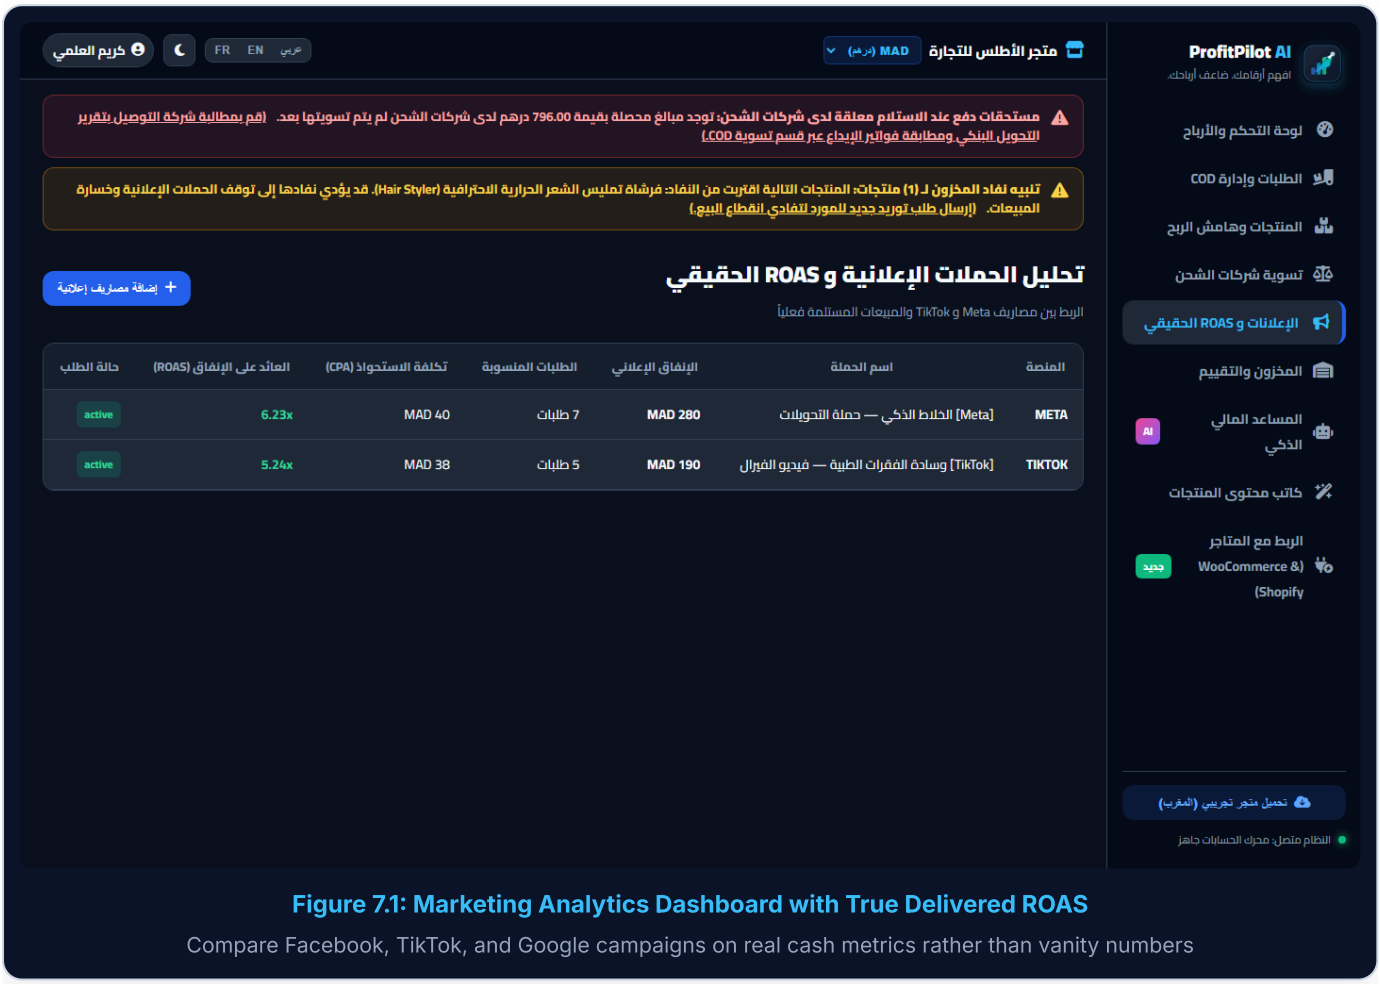

Figure 7.1: Marketing Analytics Dashboard with True Delivered ROAS

Compare Facebook, TikTok, and Google campaigns on real cash metrics rather than vanity numbers

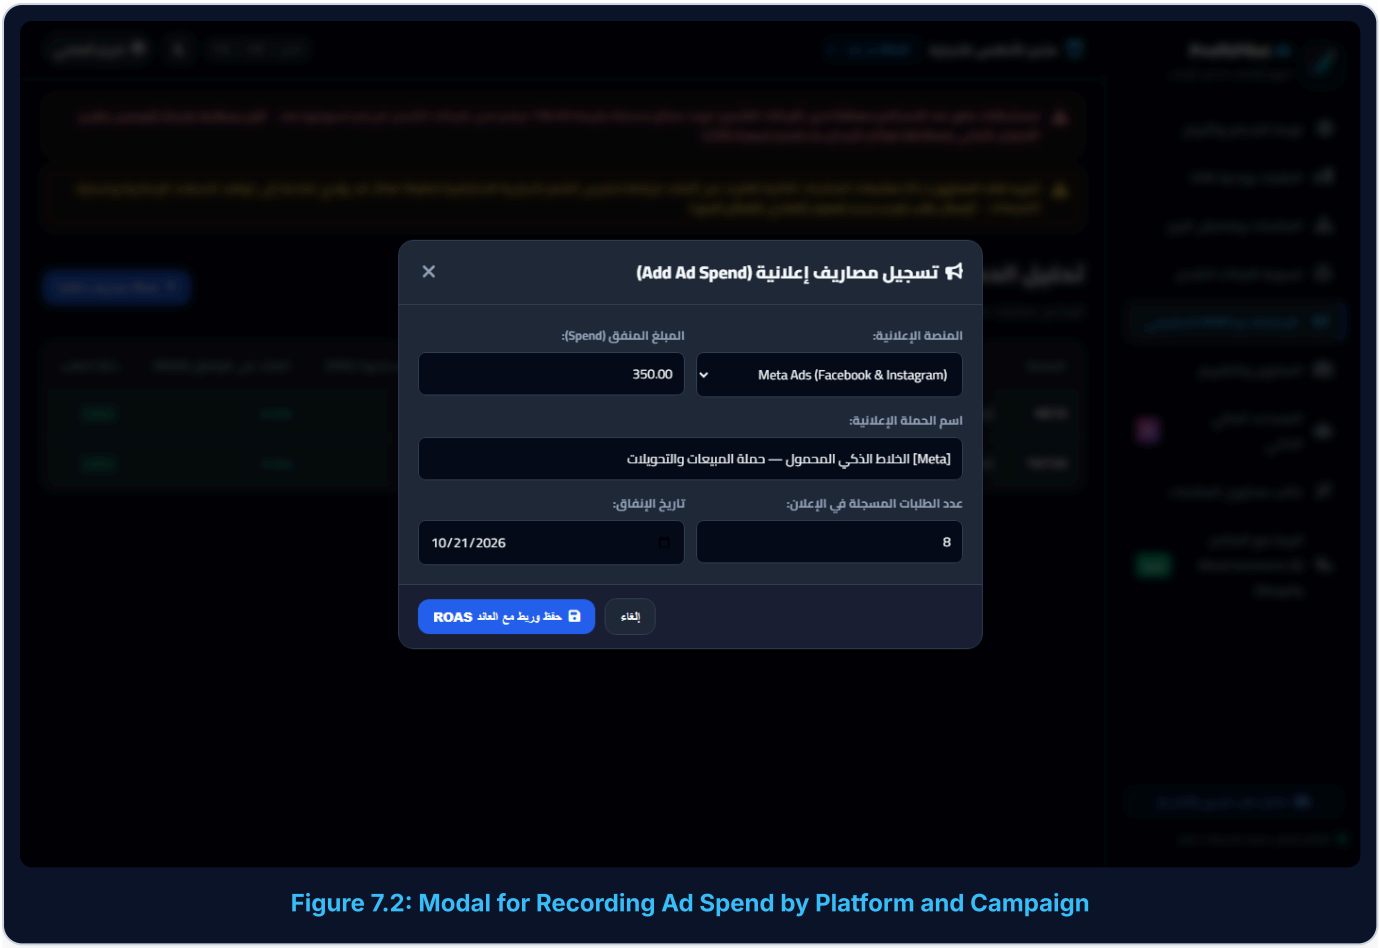

Figure 7.2: Modal for Recording Ad Spend by Platform and Campaign

Chapter 8: Product Catalog, COGS & Margin Simulator

Chapter 08

8.1 Product Profitability & Break-Even Delivery Rate

Track supplier purchase costs (COGS), selling prices, packaging costs, and calculate the **Break-Even Delivery Rate** for every single product in your store.

Figure 8.1: Product Catalog with Nominal Margins and Stock Tracking

Monitor stock levels, break-even delivery thresholds, and automated low-stock warnings

Break-Even Calculation: If a product costs $10 from supplier, sells for $35, and shipping costs $5 with a $3 return fee, ProfitPilot AI calculates the exact delivery percentage required to avoid campaign losses.

Chapter 9: AI Financial Analyst & Catalog Copywriter

Chapter 09

9.1 AI Business Analyst & Financial Consultant

The built-in AI Analyst reads your store's live financial data to detect leaks, recommend campaign adjustments, and answer business questions with 100% deterministic grounding.

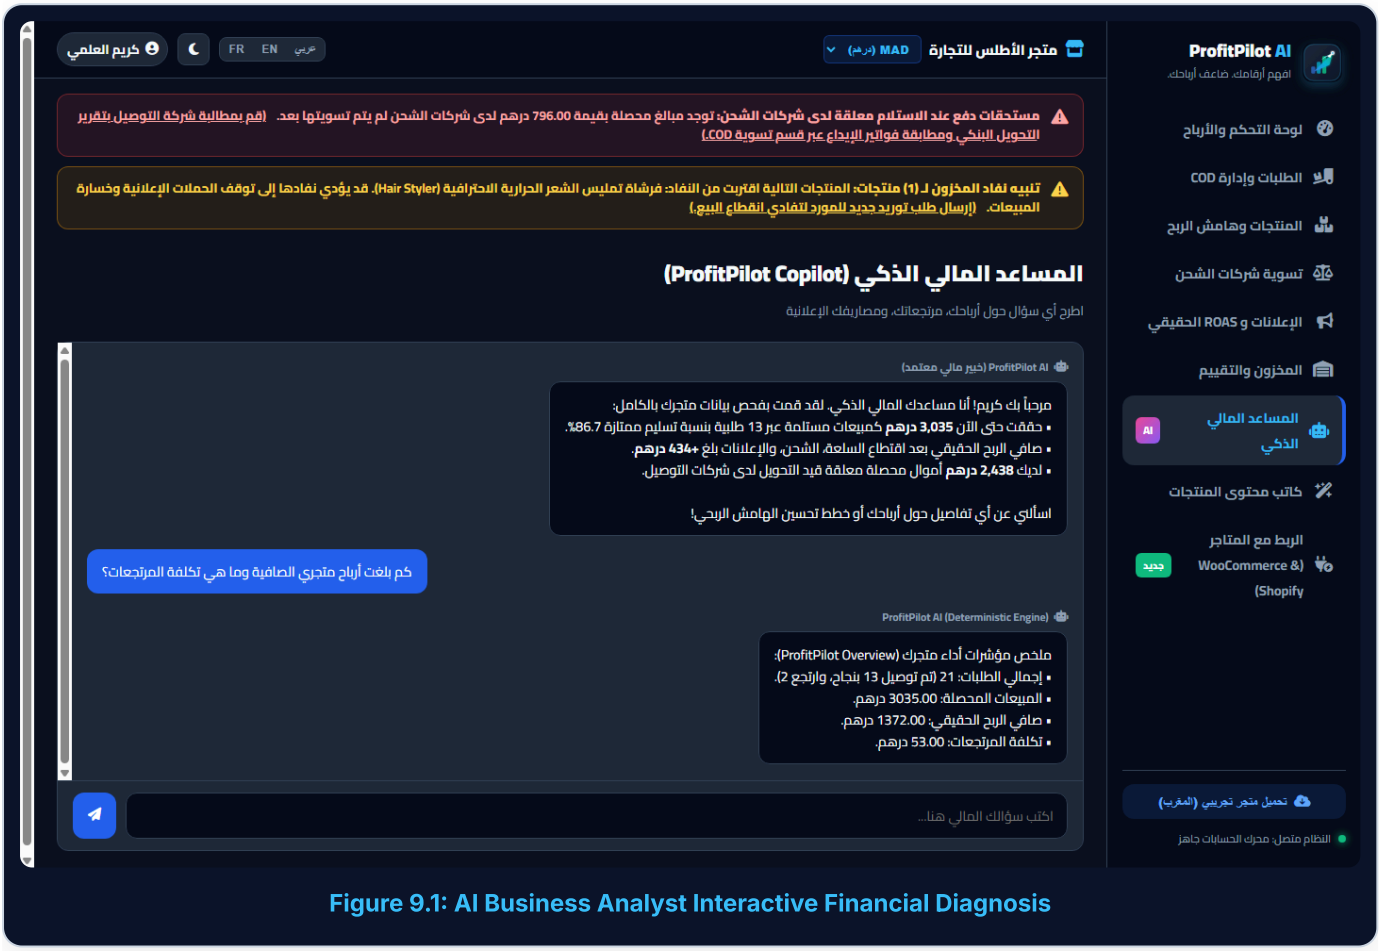

Figure 9.1: AI Business Analyst Interactive Financial Diagnosis

9.2 AI Catalog Ad Copywriter

Generate high-converting marketing hooks, pain-point analyses, and TikTok video scripts tailored for Arabic and English speaking e-commerce audiences.

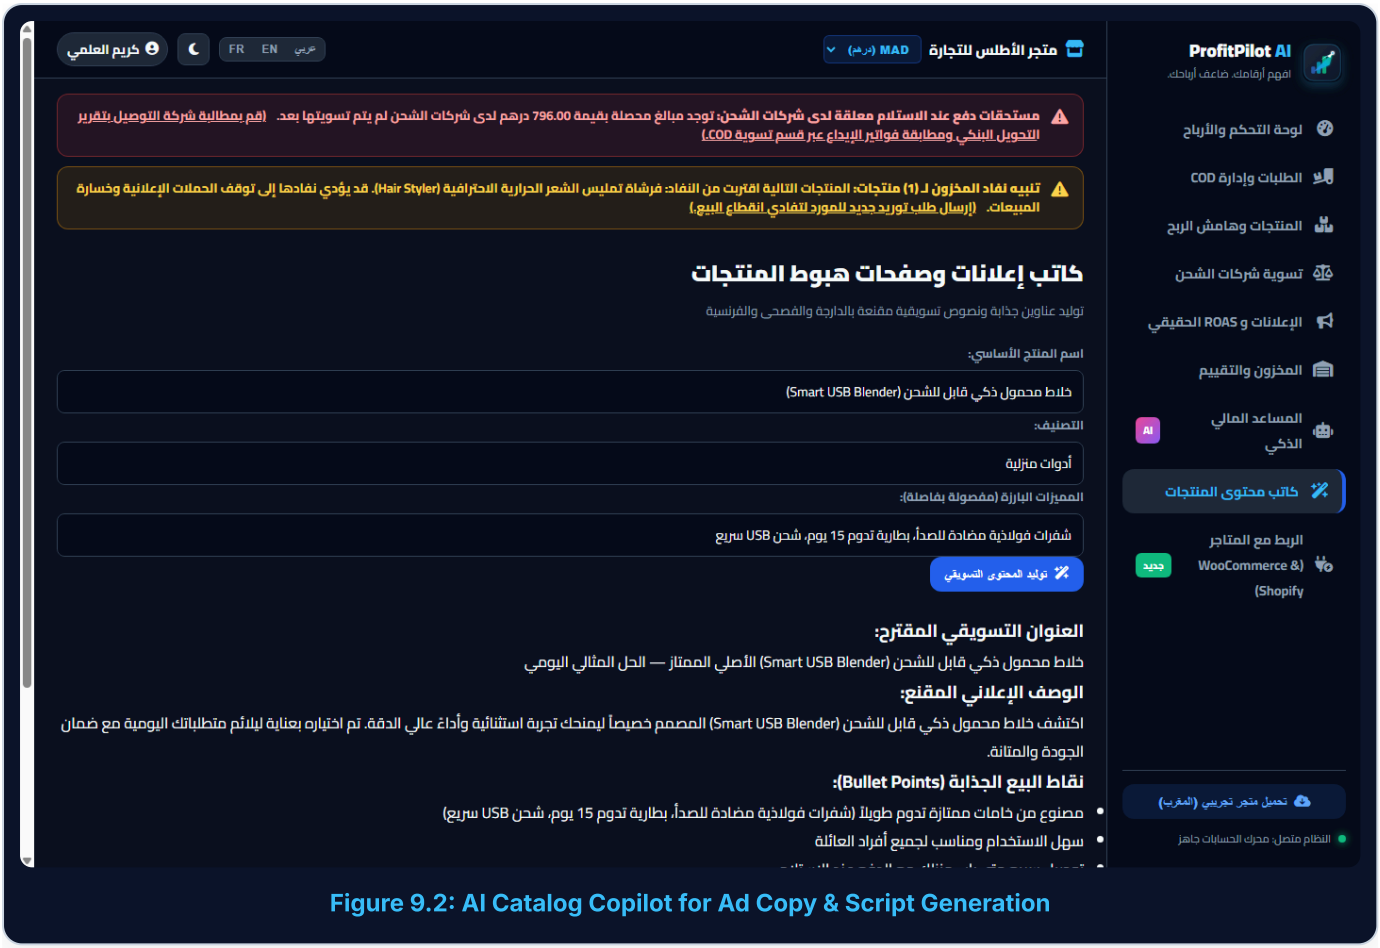

Figure 9.2: AI Catalog Copilot for Ad Copy & Script Generation

Chapter 10: WooCommerce & Shopify Live Webhook Integrations

Chapter 10

10.1 Real-Time Automated Order Sync

Connect your external WooCommerce or Shopify store via secure webhooks. New customer orders appear inside ProfitPilot AI within milliseconds, complete with items, customer phone, and shipping city.

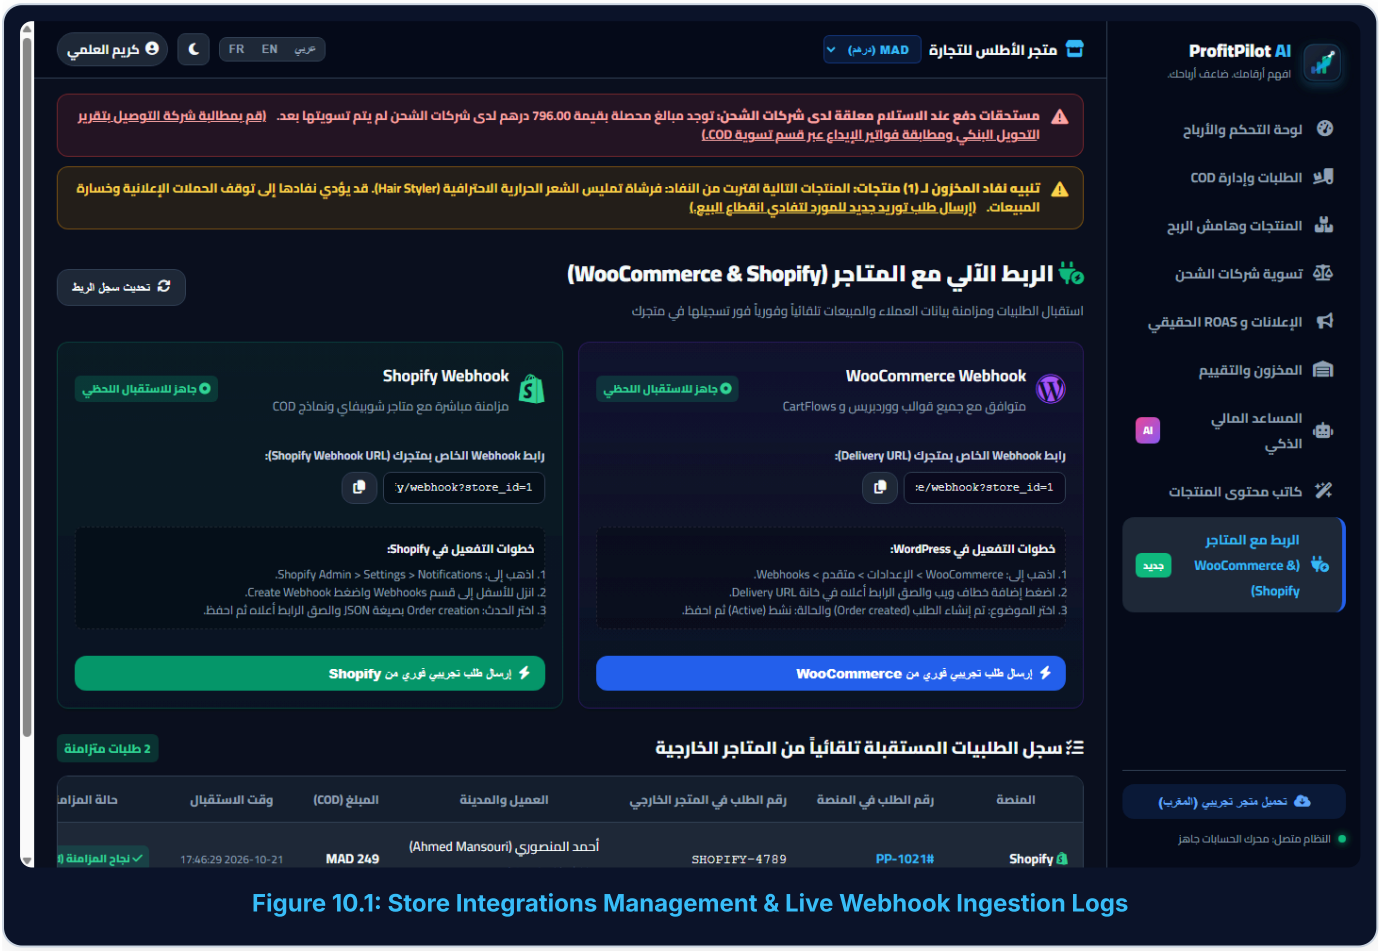

Figure 10.1: Store Integrations Management & Live Webhook Ingestion Logs

10.2 WooCommerce Integration Guide

1. Navigate to: **WooCommerce > Settings > Advanced > Webhooks**.
2. Click **Add Webhook** and configure:
   - **Topic:** Order created
   - **Delivery URL:** `http://[your_server]:8000/api/v1/integrations/webhook/woocommerce`
   - **API Version:** WP REST API Integration v3
3. Save the webhook. All incoming orders will sync automatically.

Chapter 11: Merchant Profile, Bank Accounts & Multi-Currency

Chapter 11

11.1 Merchant Profile & Payout Bank Configuration

Clicking the user pill opens the Profile modal to configure store branding, primary operating currency, WhatsApp contact, receiving bank name, and official bank RIB / IBAN.

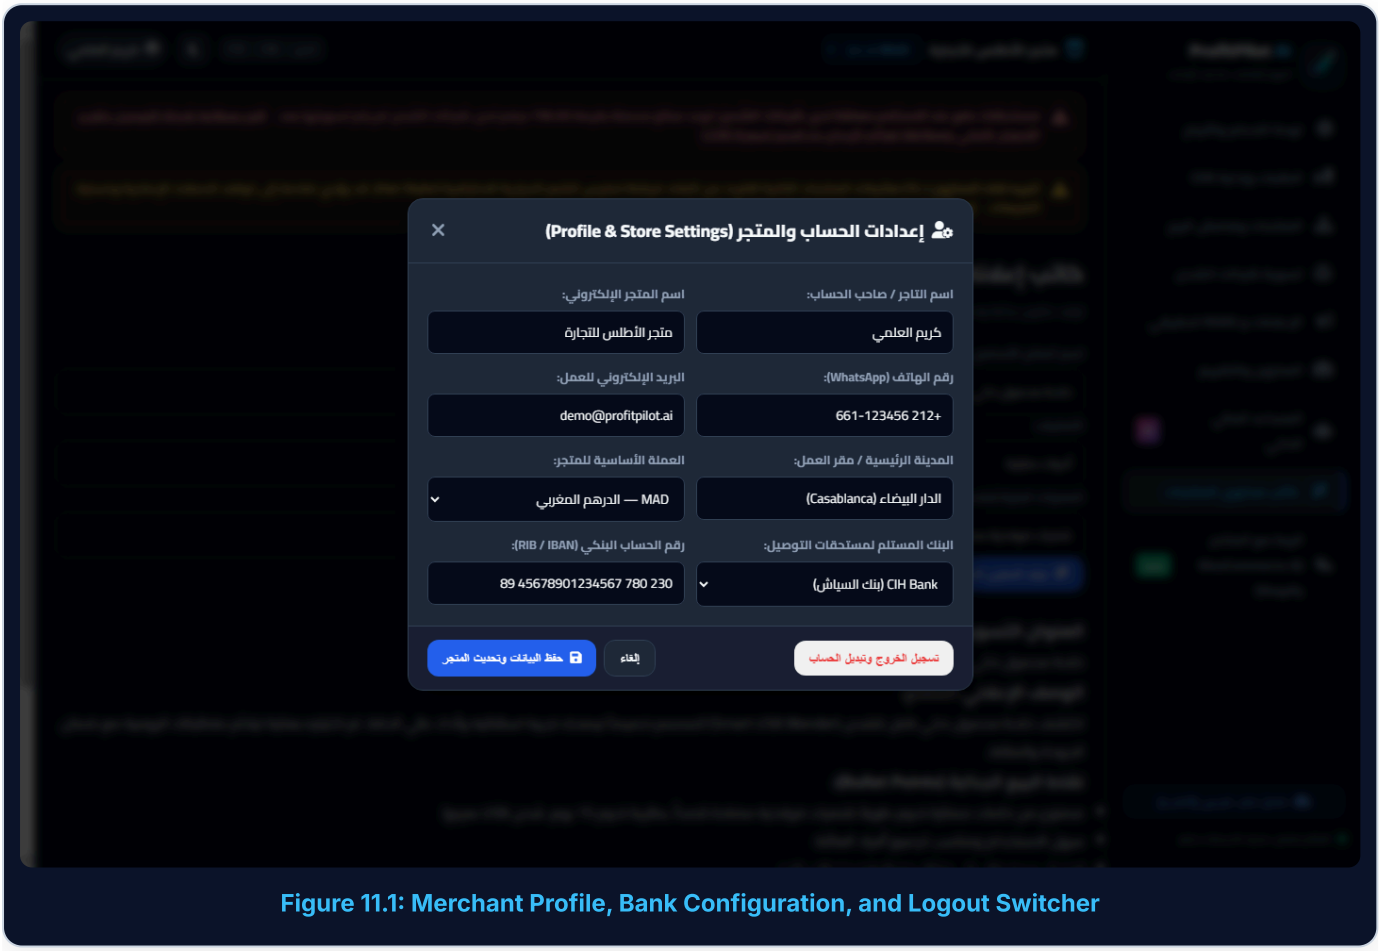

Figure 11.1: Merchant Profile, Bank Configuration, and Logout Switcher

11.2 Multi-Language Switcher (English, Arabic, French)

Instant single-click language toggle across all 9 tabs with automated LTR / RTL direction adjustment.

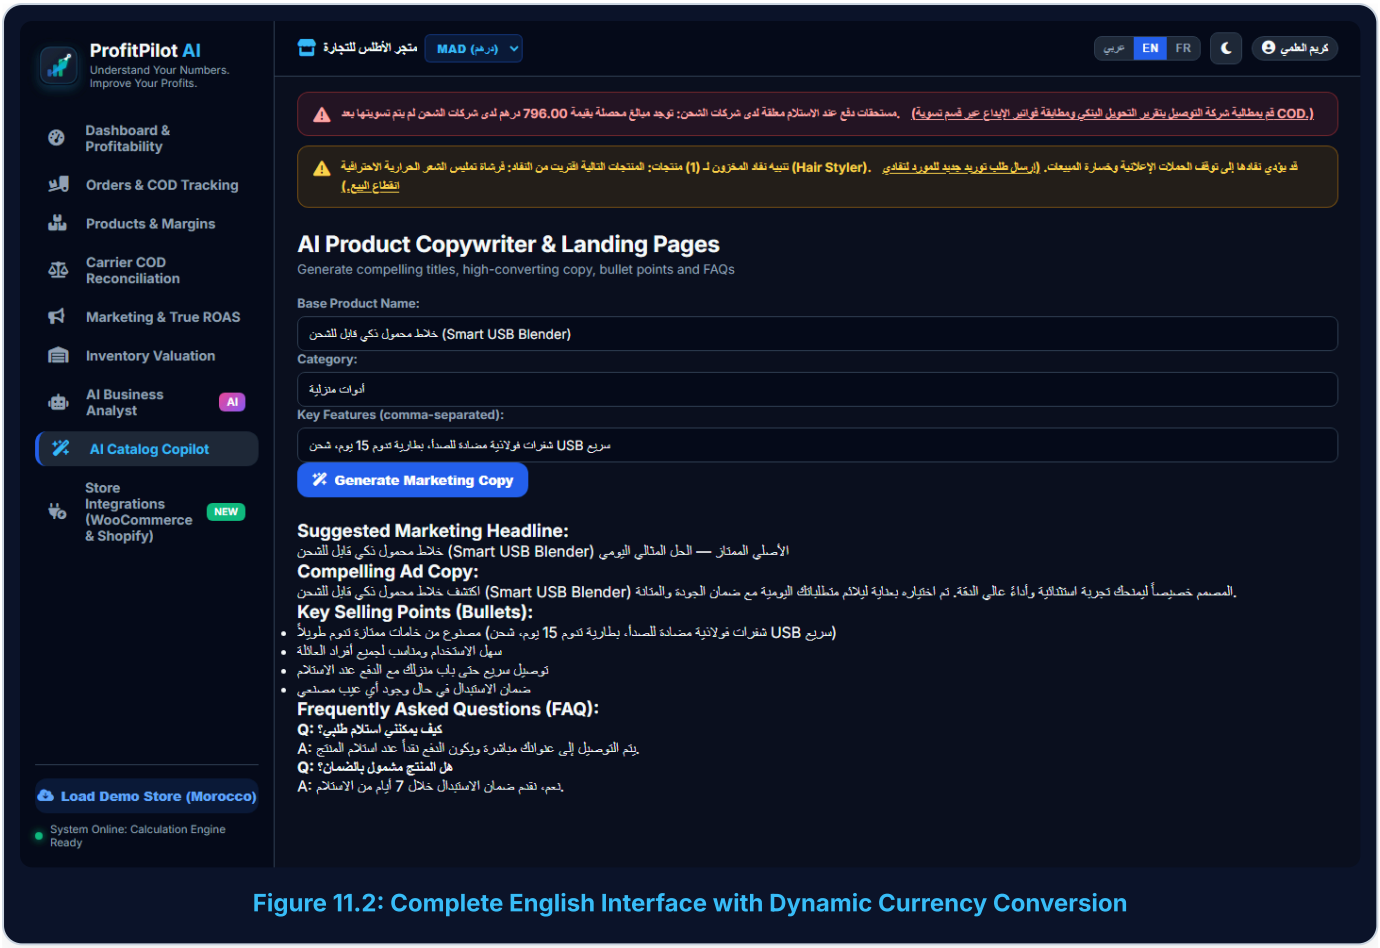

Figure 11.2: Complete English Interface with Dynamic Currency Conversion

Chapter 12: Mobile Experience & Android APK Deployment

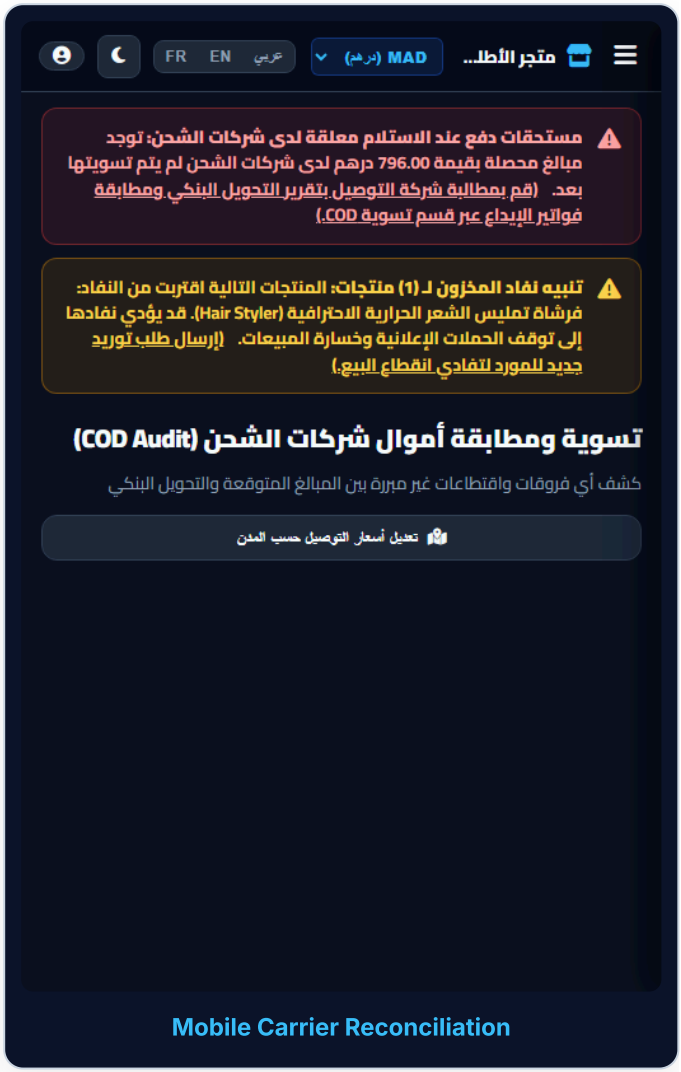

Chapter 12

12.1 Mobile Application Architecture

ProfitPilot AI is built mobile-first. Manage your online business, check daily collections, and audit delivery couriers directly from your Android phone on the go.

Mobile Dashboard

Mobile Carrier Reconciliation

12.2 Android APK Installation

1. Copy `ProfitPilot_AI.apk` to your Android device via USB, WhatsApp, or Google Drive.
2. Tap the file to install and allow "Install from Unknown Sources" if prompted.
3. Open the application, sign in with your email and password, and your store is live!

12.3 Deployment Options for Teams & Confirmation Call Centers

Because ProfitPilot AI is 100% self-hosted with complete data sovereignty, you can deploy it in two flexible modes:

- **Office Local Network (LAN):** Run the server on your primary PC; confirmation agents on the same local Wi-Fi / LAN can access the web application simultaneously via your local IP (e.g., `http://192.168.1.50:8000/web/`).
- **Dedicated Cloud VPS:** Host the system on your private VPS (such as DigitalOcean, Contabo, or Hetzner for $5-$10/month). Your confirmation agents and call center callers can log in securely from anywhere 24/7, while you monitor profits on your mobile phone in real time.

> **Manual Conclusion:** You now possess a production-grade, commercially ready management system. ProfitPilot AI gives online merchants the financial clarity needed to scale profitably in the cash-on-delivery ecosystem.
